Nantes Université

Innovative materials to address major technological challenges

Thanks to its world-class expertise and strong culture of collaboration, the IMN brings together more than 200 people united by a common goal: to develop the materials that will shape the future.

+ 200 people

Physics - Chemistry

The IMN is committed to an approach that integrates: the design and synthesis of materials at the atomic scale, the conception and characterisation of materials, their properties and modelling.

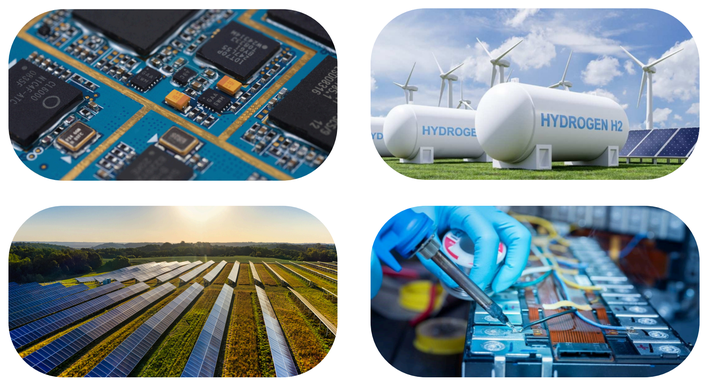

Organised by expertise and subject areas: 5 research teams

- **Electrochemical energy storage and conversion**
- **Physics of Materials and Nanostructures**
- **Plasmas and Thin Films**
- **Innovative Materials for Optics, Photovoltaics, and Energy Storage**
- **Materials Engineering and Metallurgy**

Practical applications that benefit society

- Circular economy
- Energy saving
- Energy storage
- Energy conversion
